

## UPS Shenzhen Asia Pacific Hub Fact Sheet

---

At its strategic location in South China, UPS's Asia Pacific hub in Bao'an International Airport allows UPS to provide overnight delivery services to destinations in the Asia Pacific region. About 500 employees maintain round-the-clock operations at the hub, which houses sorting and handling facilities for express shipments, on-site customs office and processing – and a dedicated 150,000 square meter ramp with 13 aircraft parking positions. Self-operated aircraft ground-handling provides UPS, as a logistics integrator, with greater control over the 86 weekly UPS flights in and out from the hub.
