

KOREA

PATH TO RECOVERY

Both women- and men-led SMBs in Korea have been recovering steadily from the COVID downturn. For example, by 2022, 52 percent of women-led firms registered positive revenue growth, up from 42 percent in 2020 (figure 1).

E-commerce Trends and Challenges

Primary e-commerce challenges in 2023

As many as 93 percent of micro and small enterprises in Korea used some type of marketplace to sell their goods and services. 81 percent of micro and small firms, and 81 percent of medium firms were omnichannel sellers (figure 2).

Use of digital marketing and sales channels in 2022, by firm size (figure 2)

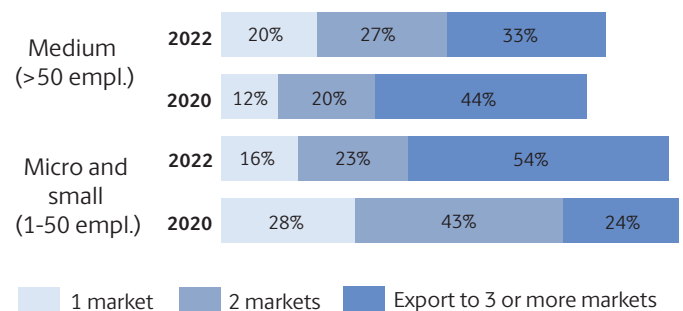

Is e-commerce a priority?

In turn, e-commerce is enabling Korean SMBs to engage in trade and access new markets: 80 percent of firms that use e-commerce intensively diversified their export markets in 2021-22 (figure 3). By 2022, 54 percent of micro and small businesses and 33 percent of medium businesses exported to three or more markets, up from 24 percent for micro and small firms and down from 44 percent for medium firms in 2020 (figure 4).

% of SMBs that diversified export markets in 2022 from 2020, by online sales intensity (figure 3)

Number of export markets in 2020 and 2022, by firm size (figure 4)

Challenges for SMBs

Maintaining and managing their own online store continues to be a challenge for Korean firms toward growth through trade and e-commerce. Over 40 percent of the surveyed SMB exporters cited maintaining stores on marketplaces, tariffs and/or market access rules in their own market, cost of domestic in-land logistics, and long duration of customs clearance and border processes as “extremely important barriers” (figure 5).

Top-5 “extremely important” challenges facing SMBs revenue growth and exports in 2023-24 (figure 5)

SMBs need to become more sustainable.

To make their green transition, SMBs call for a better understanding of the ways in which they can become greener and access to the right staff capabilities to make their operations greener (figure 6).

SMBs needs to become more sustainable (figure 6)

Policy Recommendations

Resiliency: To ensure SMB resiliency, governments should focus on reducing trade costs through simplification of trade processes, trade liberalization, and improvements in logistics quality.

Gender: To support the continued growth of women-led SMBs, promote women’s access to digital technologies, financing, and new export markets.

E-commerce and Trade: To encourage SMB exports through e-commerce, ensure quality internet connections and capacity-building to grow presence on global online marketplaces, and digitized trade processes to streamline online seller-SMBs to export.

Sustainability: Support SMBs with their green transition through awareness-building on optimal methodologies to green their businesses, measurement of their carbon footprint, and financing.
